

## Making your paper Rocket

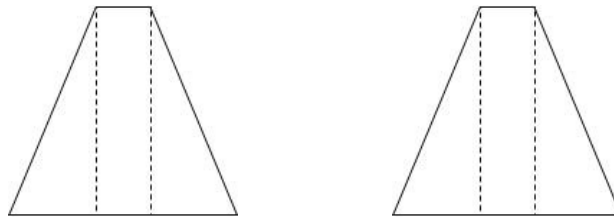

You will be given a piece of paper like the one below

Cut around the solid lines of the body tube and the fins, you should end up with.

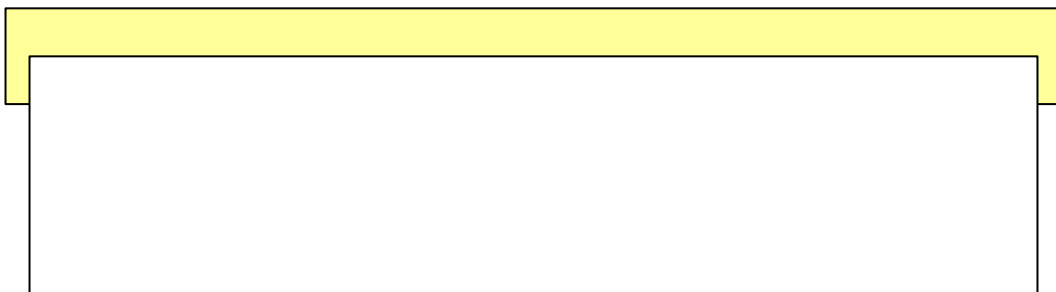

One piece of paper for the

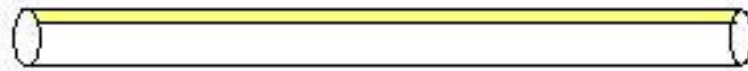

Two pieces of paper for fins

Now lay a length of magic tape sticky side up on the table and put the body tube paper on to of half of it.

Now roll the paper round the wooden dowel starting with the side that has not tape on it.

When complete the tape will stick to the paper to form a paper tube. Now remove the dowel.

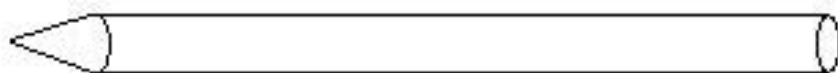

Now put 5-6 short cuts into the end of the tube.

Slide the dowel back into the tube with the pointy end at the side where the tube has been cut.

Now twist the cut paper round the pointed end on the dowel to form a pointed end to the tube of paper, (you may need to trim some paper off). Once the point is formed use magic tape to secure.

Fold along the dotted lines on the fins and then open it back out.

Cut a length of magic tape down the middle to form 2 thin strips of tape.

Position the fins near the end of the tube and attach with tape.

Attach second set of fins opposite first set and move fins into a position where they are roughly evenly spaced round the tube.

Now slide the straw into the rocket, with the bendy end outside the rocket. Have the rocket pointing upwards and blow hard.
